Osteopathic Skull Model

This fascinating model of an average European adult skull can be disassembled into **22 single bones**. During development of this model one of the main targets was to make the model easy to assemble and dismantle.

Stable parts with convenient **magnet connections** make handling of the product a child's play. The detailed bones do not need any complicated pins to be stuck into holes, they almost slide into position, guided by realistic bone sutures and held by strong magnets.

Due to the very good anatomy and the easy handling this skull is the **ideal training aid for osteopathy**.

This version is perfect for visual distinction of the single bones. The bones are produced in different colours, commonly used in anatomy, geminate bones do have identical colour.

The following individual bones are shown:

- Parietal bone left and right
- Occipital bone
- Temporal bone left and right
- Sphenoid bone
- Frontal bone
- Ethmoid bone
- Vomer
- Palatine bone, left and right
- Inferior nasal concha left and right
- Maxilla with teeth, left and right
- Lacrimal bone left and right
- Nasal bone left and right
- Zygomatic bone left and right
- Mandible with teeth
