# Skin Suturing Trainer

The Skin Suturing Trainer is an innovative training device specifically designed to enable healthcare professionals and students to improve their skills in skin suturing techniques. The realistic skin module offers a variety of suturing techniques, providing a hands-on learning experience. Developed in collaboration with PD Dr. med. Sarah König, Learning Studio of Surgery, Department of General and Visceral Surgery, University Medical Center Göttingen.

## Features:

- **Realistic skin simulation:** The high-quality materials imitate human skin and enable an authentic suturing experience. This makes it possible to train any type of suture.
- **Easy handling:** 4 suction cups create an optimal hold on any smooth surface and ensure easy operation.
- **Reusable:** A cost-effective training option, the main suture pads are durable and can be used multiple times.
- **Improve practical skills:** By practicing regularly with the skin suture trainer, you can increase your dexterity and precision in wound care.
- Ideal for further education, training and simulation training

## Suturing techniques:

- Single button suture
- Continuous suture
- Backstitch suture according to Donati
- Backstitch suture according to Allgöwer
- Continuous intracutaneous suture
- Intracutaneous single button suture
- Skin staples

**Dimension:** 15 x 13 cm
